

IN THE SPECIFICATION:

Please delete paragraph [0006] at page 2.

Please delete paragraph [0007] at page 3.

Please add the following paragraphs [0014A] and [0014B] at page 15 after the end of paragraph [0014] and before "Brief Description of Drawings" [0015].

[0014A]

As already described above, according to the present invention, the cover is configured so that the opening area of the front inlet of the suction inlet main body are decreased when the suction inlet unit is pushed forward, causing the suction inlet main body to contact with a wall or furniture, thus the dust on the cleaning surface is prevented from being pushed forwards and the dust near the wall are also sucked in efficiently by a strong suction force.

[0014B]

Moreover, when a front portion of the suction inlet main body is pushed contacting with the wall or furniture, the cover is pushed backward and at least one part of the cleaning member of the rotary cleaning body protrudes from the front suction inlet ahead of the suction inlet unit ensuring that the dust near wall K will be scraped out and brushed with certain by the cleaning member.
